

Welcome to the
**Gilbert Advanced
 Manufacturing Facility!**

Dynetics has expanded our capabilities where our customers can design, prototype, and manufacture their projects on our Huntsville campus. The new Gilbert Advanced Manufacturing Facility adds **78,000 sq. ft** for **large manufacturing as well as assembly**. We will now increase our current production volume and offer classified manufacturing.

1 **Location with FULL-SPECTRUM CAPABILITIES**

Heart of the Tennessee Valley

LET'S TAKE A LOOK INSIDE...

78,000 square feet for assembly

200+ engineers, technicians, & machinists

30,000+ circuit boards created annually

THE DYNETICS DIFFERENCE

The Gilbert Facility offers a **high mix/low volume production line**, which makes it appealing to the customers needing to fill a niche manufacturing run.

HIGH mix LOW volume

Our employees will build and assemble **COMPONENTS** and **END-TO-END** systems.

GroundAware® is a family of reconfigurable, short and long range surveillance sensors for real-time situational awareness of critical infrastructure.

Our **automotive testing products** are engineering tools for the entire life cycle of commercial vehicles. Our systems are integrated on the floor at assembly plants, engineering technical centers, and proving grounds around the world.

Our **electronics manufacturing** capabilities allow for our suite of avionics products and printed circuit boards to be built with better efficiency, cutting production time by weeks.

The **final product assembly of large and small systems** allows for all our teams to bring together electrical and mechanical components and build complete systems in a single area of production.
